RESPONSE TO AMENDMENT

Request for Continued Examination

1. The Request for Continued Examination (RCE) under 37 CFR 1.53 (d) filed on March 7, 2006 is acceptable and a RCE has been established. An action on the RCE follows.
2. Claims 1-4, 6-10, 13 and 14 are pending in the application, claims 5, 11 and 12 have been cancelled.
3. Amendments to the claims, filed on February 14, 2006, have been entered in the above-identified application.

REJECTIONS

4. **The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.**

Claim Rejections - 35 USC § 103

5. Claims 1-4, 6-10, 13 and 14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ota et al. (U.S. Patent No. 4,481,163) in view of Chubb et al. (U.S. Patent No. 6,214,424).

Ota discloses a molded thermoplastic product (*col. 3, lines 24-36*) comprising an outer surface with an etched pattern (*sandblasted, rugged ground surface, col. 3, lines 59-61*) and frosted matte finish (*col. 2, lines 5-10*). Ota discloses that the outer surface is located in one area of the product to provide a different matte finish appearance from the remainder of the product (*col. 2, lines 46-51*). Ota discloses that the product is molded from a thermoplastic resin that is

Art Unit: 1772

transparent, semi-transparent, or translucent (*col. 4, lines 5-22*). Ota discloses that the thermoplastic resin is polyethylene terephthalate (*col. 3 line 39*). As seen in Ota's figure 2 the ratio of depressions to lands in the surface area can range from about 50 to about 80 percent. Ota discloses that the product is useful as a container (*col. 1, line 12*). Ota discloses that the colorant provides diffused translucency to the product and has texture (*col. 2, lines 5-21*).

Ota fails to disclose that the frost colorant is present from about 0.2 to about 5 parts by weight of the thermoplastic resin and the depth of the depressions in the etch pattern.

Chubb discloses a frosted polymer composition with 1 part by weight colorant (*example 1*). Chubb also discloses that it is desirable for bottles to be opaque or translucent (*col. 3, lines 61-67*).

Therefore it would have been obvious to one of ordinary skill in the art to add 1 part by weight colorant to Ota's composition as taught by Chubb in order to create an opaque bottle.

The exact depth of the depressions is deemed to be a result effective variable with regard to the frosted look. It would require routine experimentation to determine the optimum value of a result effective variable, such as parts by depth of depressions, in the absence of a showing of criticality in the claimed parts by weight. *In re Boesch*, 205 USPQ 215 (CCPA 1980), *In re Woodruff*, 16 USPQ2d 1934, 1936 (Fed. Cir. 1990).

ANSWERS TO APPLICANT'S ARGUMENTS

6. Applicant's arguments in the response filed October 18, 2005 regarding the previous rejections of record have been considered but are moot due to the new grounds of rejection.
